Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

Group I: Claims 1-22, drawn to an apparatus for accessing and controlling of data in non volatile memory, class 711, subclass 103; accessing of data in dynamic random accessible memory classified in class 711, subclass 105.

Group II: Claims 23-32, drawn to a method of data being prefetched and being retrieved from a low level memory into a high level memory, classified in class 711, subclass 137.

Inventions I and II are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable. In the instant case, invention II has separate utility such as copying partial data into the non-volatile memory and dynamic random access memory from a mass memory

Likewise the invention I have a separate utility such as setting the operating parameters such as core voltage, frequency ranges of a particular device. Controlling access of a memory device (write protection etc.). Partitioning data in a memory into separate partitions such as temporal data area, permanent storage area. See MPEP 806.05(d).

Because these inventions are distinct for the reasons given above and the search required for any one invention is not required for the other invention, restriction for examination purpose as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement is traversed (37 CFR 1.143).
